Team ID	SWUID2026317864
Project Name	Farm Management System
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS	THINKS
- Needs easy farm and crop record management - Needs accurate agricultural data - Wants faster reports and monitoring	- Needs accurate and timely farm data - Manual records can cause errors and delays - Automation can improve efficiency
Farmer Farm User - Enters records manually - Maintains farm and crop records - Uses registers, paper files and spreadsheets	- Frustrated and confused by incorrect records - Concerned about data loss, errors and delays - Wants automation and fast reporting
